

QA Testing & Defect Reporting

Case Study — Sample Work

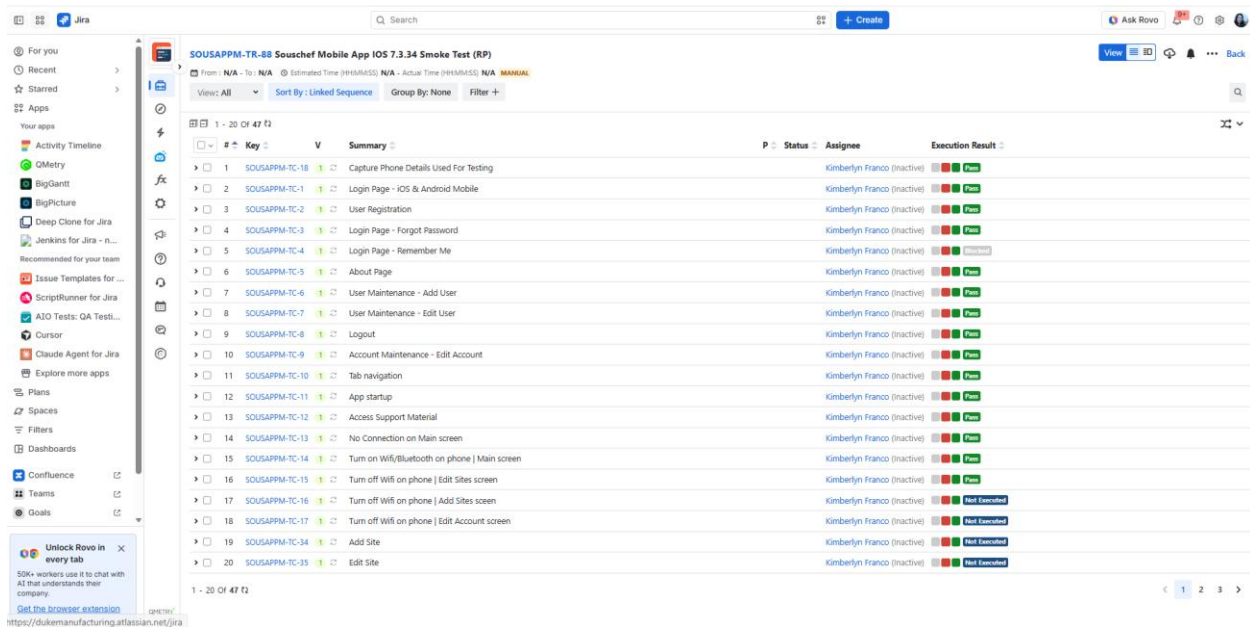

QMetry • Jira • Manual Testing • Regression Testing • Defect Tracking

Project Overview

As part of my QA and Technical Support role, I plan and execute manual test cycles against both mobile and cloud applications, log results in QMetry (Jira's native test management add-on), and report any defects found directly into the team's Jira backlog for triage. This case study walks through two representative test cycles: a smoke test of the Sous Chef mobile app on iOS, and a full regression test of the Sous Chef Cloud website, along with the bugs each cycle surfaced.

1. Smoke Test — Mobile Application (iOS)

For each new build, I run a smoke test passing across the core flows of the Sous Chef Mobile App before deeper regression testing begins. The QMetry test run below tracks 47 individual test cases — covering login, registration, password recovery, user and account maintenance, navigation, connectivity states, and Wi-Fi/Bluetooth handling — each logged with a pass/fail/blocked execution result and assigned owner.

	#	Key	V	Summary	P	Status	Assignee	Execution Result
1	1	SOUSAPPM-TC-18	1	Capture Phone Details Used For Testing		Pass	Kimberlyn Franco (inactive)	Pass
2	2	SOUSAPPM-TC-1	1	Login Page - iOS & Android Mobile		Pass	Kimberlyn Franco (inactive)	Pass
3	3	SOUSAPPM-TC-2	1	User Registration		Pass	Kimberlyn Franco (inactive)	Pass
4	4	SOUSAPPM-TC-3	1	Login Page - Forgot Password		Pass	Kimberlyn Franco (inactive)	Pass
5	5	SOUSAPPM-TC-4	1	Login Page - Remember Me		Pass	Kimberlyn Franco (inactive)	Pass
6	6	SOUSAPPM-TC-5	1	About Page		Pass	Kimberlyn Franco (inactive)	Pass
7	7	SOUSAPPM-TC-6	1	User Maintenance - Add User		Pass	Kimberlyn Franco (inactive)	Pass
8	8	SOUSAPPM-TC-7	1	User Maintenance - Edit User		Pass	Kimberlyn Franco (inactive)	Pass
9	9	SOUSAPPM-TC-8	1	Logout		Pass	Kimberlyn Franco (inactive)	Pass
10	10	SOUSAPPM-TC-9	1	Account Maintenance - Edit Account		Pass	Kimberlyn Franco (inactive)	Pass
11	11	SOUSAPPM-TC-10	1	Tab navigation		Pass	Kimberlyn Franco (inactive)	Pass
12	12	SOUSAPPM-TC-11	1	App startup		Pass	Kimberlyn Franco (inactive)	Pass
13	13	SOUSAPPM-TC-12	1	Access Support Material		Pass	Kimberlyn Franco (inactive)	Pass
14	14	SOUSAPPM-TC-13	1	No Connection on Main screen		Pass	Kimberlyn Franco (inactive)	Pass
15	15	SOUSAPPM-TC-14	1	Turn on Wi-Fi/Bluetooth on phone Main screen		Pass	Kimberlyn Franco (inactive)	Pass
16	16	SOUSAPPM-TC-15	1	Turn off Wi-Fi on phone Edit Sites screen		Pass	Kimberlyn Franco (inactive)	Pass
17	17	SOUSAPPM-TC-16	1	Turn off Wi-Fi on phone Add Sites screen		Not Executed	Kimberlyn Franco (inactive)	Not Executed
18	18	SOUSAPPM-TC-17	1	Turn off Wi-Fi on phone Edit Account screen		Not Executed	Kimberlyn Franco (inactive)	Not Executed
19	19	SOUSAPPM-TC-34	1	Add Site		Not Executed	Kimberlyn Franco (inactive)	Not Executed
20	20	SOUSAPPM-TC-35	1	Edit Site		Not Executed	Kimberlyn Franco (inactive)	Not Executed

Fig. 1 — QMetry test run: Sous Chef Mobile App iOS 7.3.34 Smoke Test (47 test cases)

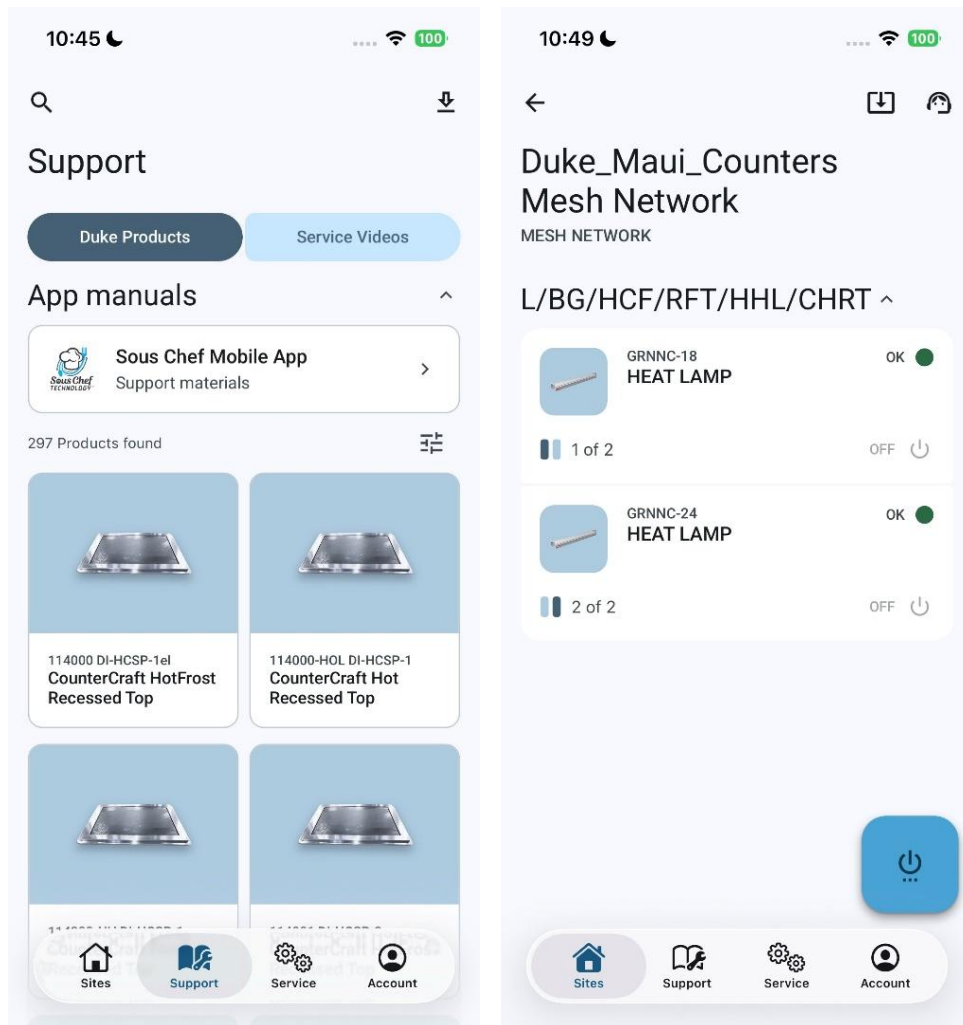

Fig. 2 — App support materials and the Duke_Maui_Counters mesh network device list, showing two Heat Lamp units online

This is the physical heat lamp control panel referenced in the app above — used to cross-check that on-device state (Low / Med / High) matched what the mobile app reported.

Test Environment — Connected Hardware

The mobile app controls physical smart-kitchen hardware over a mesh network, so smoke testing includes verifying the app correctly discovers, displays, and controls connected devices. Below is the in-app support/reference material and the mesh-network device list used to confirm the app was talking to the right physical unit during testing.

Fig. 3 — Physical Heat Lamp control panel used to validate app-to-device state during testing

Defects Logged — Jira Backlog

Issues found during the smoke test were logged straight into the SMARTPART sprint backlog with clear, reproducible titles so engineering could pick them up without needing to ask follow-up questions. This pass surfaced eight defects, including confusing UI copy, a spelling error in the Celsius temperature label, a broken downloads flow, and two Android crash scenarios.

SMARTPART Sprint #13 from SMART board 12 Aug – 1 Sep (17 of 23 work items visible)				17	14	0	Complete sprint	...
Bug Fix and Automated Testing Julia: Firmware Release CFA IBBT and validate Anna: Continue to move forward DEB3 and DMX Smart Part Work. Test and Validate. 2. Full Regression Test — Cloud Website

For the Sous Chef Cloud web application, I execute a full regression suite ahead of each release, focused on the Access Manager module — account and sub-account creation, editing, permissions, and navigation across nested sub-accounts and sites. The QMetry run below shows 73 test cases covering this area, each executed and logged with a pass, fail, or blocked result.

#	Key	V	Summary	P	Status	Assignee	Execution Result
41	SOUSCLOUD-TC-2746	1	RFHU Configurator: Access Manager - Validation of Two Pin Rotation Feature		Pass	Aris Bantique David	Pass
42	SOUSCLOUD-TC-2871	1	Equipment Type: Access Manager - Verify Menu is Unavailable		Pass	Aris Bantique David	Pass
43	SOUSCLOUD-TC-2872	1	Companies: Access Manager - Verify Menu is Unavailable		Pass	Aris Bantique David	Pass
44	SOUSCLOUD-TC-2767	1	Account Request: Access Manager - Verify Menu is Unavailable		Pass	Aris Bantique David	Pass
45	SOUSCLOUD-TC-2876	1	Account: Access Manager - Verify Can Navigate to the Account page		Pass	Aris Bantique David	Pass
46	SOUSCLOUD-TC-2739	1	Account: Access Manager - Verify Cannot Edit Current (Own) Account Settings		Fail	Aris Bantique David	Fail
47	SOUSCLOUD-TC-2738	1	Account: Access Manager - Verify Can Add New Sub-Account from Account Main Page		Pass	Aris Bantique David	Pass
48	SOUSCLOUD-TC-2878	1	Account-View Accounts: Access Manager - Verify Can Add New Sub-Account from Sub-Account Page		Pass	Aris Bantique David	Pass
49	SOUSCLOUD-TC-2832	1	Account-View Accounts: Access Manager - Verify Can View the Account's Sub-Accounts		Pass	Aris Bantique David	Pass
50	SOUSCLOUD-TC-2879	1	Account: Access Manager - Verify Can Edit Existing Account's Sub-Account		Pass	Aris Bantique David	Pass
51	SOUSCLOUD-TC-2683	1	Account: Access Manager - Verify Can Edit Existing Account's Sub-Account and Set to Inactive		Pass	Aris Bantique David	Pass
52	SOUSCLOUD-TC-2777	1	Account: Access Manager - Verify Cannot Delete Account's Sub-Account		Fail	Aris Bantique David	Fail
53	SOUSCLOUD-TC-2881	1	Account-View Accounts: Access Manager - Verify Can Add Nested Sub-Account (Sub-Account of a Sub-Account)		Pass	Aris Bantique David	Pass
54	SOUSCLOUD-TC-2882	1	Account-View Accounts: Access Manager - Verify Can Edit Nested Sub-Account (Sub-Account of a Sub-Account)		Pass	Aris Bantique David	Pass
55	SOUSCLOUD-TC-2884	1	Account-View Accounts: Access Manager - Verify Can Edit Nested Sub-Account (Sub-Account of a Sub-Account)		Pass	Aris Bantique David	Pass
56	SOUSCLOUD-TC-2778	1	Account-View Accounts: Access Manager - Verify Can View the Nested Sub-Account (Sub-Account of a Sub-Account)		Pass	Aris Bantique David	Pass
57	SOUSCLOUD-TC-2885	1	Account-View Accounts: Access Manager - Verify Cannot Delete Inactive Sub-Accounts of a Sub-Account		Pass	Aris Bantique David	Pass
58	SOUSCLOUD-TC-2754	1	Account-View Site: Access Manager - Verify Can View the Sites of the Sub-Accounts of an Account and its Ne...		Pass	Aris Bantique David	Pass
59	SOUSCLOUD-TC-2714	1	Account-View Recipe: Access Manager - Verify Can View the Recipe of the Sub-Accounts of an Account and it...		Pass	Aris Bantique David	Pass
60	SOUSCLOUD-TC-2886	1	Sites: Access Manager - Verify Can Navigate to the Site page		Pass	Aris Bantique David	Pass

Fig. 5 — QMetry test run: Sous Chef Cloud Access Manager Full Regression Test (73 test cases)

Defects Logged — Jira Backlog

Failures identified during regression — such as an incorrect error message for unverified user logins and an Access Manager permissions issue on user role changes — were written up as defects in the PORT sprint backlog, each with a precise, reproducible title describing the affected page, user role, and observed behavior.

Key	Title	Status	Priority
SOUSCLOUD-3219	Login with an unverified user shows an incorrect message.	To Do	1
SOUSCLOUD-3236	Users - On Add: When the user role selected is either Account Manager or Access Manager and an error occurs upon saving, the Access ...	To Do	1
SOUSCLOUD-3047	Counter Configurator - Account Manager can access the page via direct URL.	To Do	0
SOUSCLOUD-3049	Fault Alert Logs - Account Manager can access the page via direct URL.	To Do	0.5
SOUSCLOUD-3080	Fault Alert Logs - Access Manager can access the page via direct URL.	To Do	0
SOUSCLOUD-3134	No Support Resources for Access Manager.	To Do	0.5

Approach & Tools

- QMetry (native Jira test management) for organizing test cases, executing test runs, and recording pass/fail/blocked results
- Jira backlog for logging, prioritizing, and tracking defects through to resolution
- Manual smoke testing on each new mobile build to catch regressions in core flows before full test cycles begin
- Full regression testing of the cloud web app ahead of release, with a focus on permissions and account-management logic
- Cross-checking app behavior against physical connected hardware to validate real-world device state
- Clear, reproducible defect write-ups to minimize back-and-forth with engineering

Outcome

Across these two cycles alone, 120 test cases were executed, and 14 defects were identified, documented, and routed into active sprints for resolution — helping catch usability issues, UI copy errors, and functional bugs before they reached customers. This structured QMetry-driven approach keeps test coverage traceable release over release and gives engineering exactly what they need to reproduce and fix issues quickly.
